16 Information Technology - Preferred Supplier Arrangement CCTV Services - PSA00084 Award

Executive Summary

The Council, under the mandate of the City Safe Plan and in support of the Management, Operation and Use of Closed Circuit Television Policy, operates a comprehensive network of CCTV cameras. The system is also utilised by the Queensland Police Service to undertake monitoring of high-risk areas.

The endorsed purposes for which CCTV services are utilised are:
1. public safety;
2. staff safety;
3. environmental monitoring;
4. asset protection and insurance purposes; and
5. infrastructure protection.

In support of Council’s CCTV network, Council staff and CCTV suppliers currently undertake the following tasks:
1. monitoring of camera performance and fault finding and fault rectification;
2. maintenance of cameras including cleaning and removal of environmental blockages;
3. installation, commissioning and activation of new cameras;
4. replacement of existing cameras when they are end of life;
5. provision of specialist equipment (elevated work platforms, traffic control) for camera installation and replacement;
6. installation of last mile connectivity from camera to Council’s network; and
7. monitoring, maintenance and upgrades of Council’s Video Management System.

Provision and management of CCTV systems is not a core competency of Council and the rate of technological change within the CCTV arena is outside of Councils’ skill set. Maintaining Council’s fleet of 250 cameras and video management system requires specialist skillsets and dedicated labour. Council’s camera fleet is expected to double to around 500 cameras over the next 5 years.

Council also wishes to take advantage of advances in camera technology and video analytics. By leveraging the advances in video analytics, operational staff can continue to monitor CCTV without an increase in staff numbers whilst also improving detection and observation rates even while camera numbers are increasing.

Currently Council operates a sole supplier arrangement for obtaining of CCTV services. There is no commitment or contract period supporting this sole supplier arrangement therefore cameras and services are supplied at market rates. Additionally, Council is unable to lock in supplier resources due to this lack of commitment. No consideration is given for volume pricing that would be achieved under a preferred supplier arrangement with a five year contract length.

Council does not have the expertise or experience to support the projected growth in cameras or take advantage of technological improvements. In addition, there is a robust and highly competitive market that possesses the technological and operational capacity and are keenly interested in providing these services and expertise to Council.

This report provides an analysis and Council’s recommendation for awarding PSA00084 CCTV Services.

18 Townsville Water and Waste - Water Security Infrastructure - Haughton Duplication Project - Update

Executive Summary

Townsville City Council has developed a three part plan to ensure Water Security for Townsville. The plan includes a pipeline and supply from the Burdekin, recycled water and a community transition support package. The projects were initiated as a result of the Townsville Water Security Taskforce Interim Report. The primary project identified by the task force was the need for an additional 1800mm diameter pipeline and pumps with a capacity of 234ML/Day to deliver raw water from Haughton Pump Station to the Ross River Dam.

Funding was secured through a grant from the Queensland State Government through the Department of Natural Resources Mines and Energy to deliver water infrastructure as per the water security task force recommendations including the delivery of the pipeline.

The Haughton Pipeline Duplication Project, Stage 1 has been underway since late 2017 and is planned to be completed by December 2019. The project objectives also include the goal of maximising local content. To facilitate this goal, tender packages have been broken down into multiple smaller construction packages to suit local capability.

The project has met all milestones to date, is creating jobs for local industry and is on track to meet the completion date of December 2019.

Executive Summary

As part of the three-point water security solution, the Water Re-use Plan includes provision of a recycled water facility to recycle discharge water from the Cleveland Bay Purification Plant for non-potable water for irrigation and industrial customers. This is expected to reduce demand for potable water by up to 20 mega litres per day and, potentially, defer other capital expenditure needs.

This report provides information and Council's recommendation for consideration and adoption of the Cleveland Bay Purification Plant Tender Consideration Plan.
