CONCRETE PATHWAY TYPICAL DETAIL

wetted and compacted with

vibrating roller or plate

KEY CONSTRUCTION JOINT - KCJ Key Construction Joints to be provided between all abutting new and existing concrete works

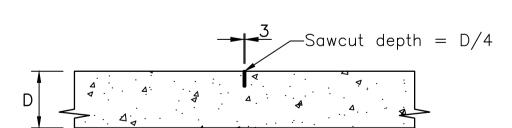

to joint (20mm deep) board for full depth of slab Galv. R12 dowel x 300 long central @ 300 cts. Grease one half and provide end cap for expansion EXPANSION JOINT - EJ

10mm thick compressible filler

Full Size A1

Not to scale

(Max. 12.0m spacing)

CONTRACTION JOINT - CJ (Max. 3.0m spacing)

CONSTRUCTION JOINTS

NOTES: Supersedes COT Dwg 10066

Articulated joint installed to manufacturers specification (eg. 'Tripstop' or approved alternative) Height of joint to match path thickness

ARTICULATED JOINT - AJ

• Articulated joint system used at trees only and must comprise minimum 5 articulated joints

DRAWN: DESIGN OFFICE

Date: 14/5/2015

Date: 14/5/2015

• Spacing is equal to path width eg. 1.5m spacing for 1.5m wide path

CHECKED: GRP

NOTES:

GENERAL

- 1. This drawing shall be read in conjunction with the design drawings, specifications and written instructions as may be issued during the course of construction. All discrepancies shall be reported immediately for decision before proceeding with the
- 2. Where proposed path does not abut existing kerb, path surface to finish as close as possible to existing surface. Maximum crossfall on path is 2.5%, maximum longitudinal grade is 1 in 14.
- 3. It is desirable to provide minimum clearances of 0.5m from property boundary and 1.0m from back of kerb. It is preferred to align the pathway outside the underground services locations situated in the road reserve, working from back of kerb as the first option.
- 4. Kerb ramps to be constructed in accordance with Townsville City Council standard drawing SD-025.
- 5. Where pathway replaces a residential driveway, upgrade concrete depth to 150mm and place SL62 mesh with 40mm top cover. Where driveways are too steep the pathway may need to be diverted towards the property boundary to achieve 2.0%
- 6. Proposed footpath location is based on site investigations. Confirm all measurements on site prior to excavation. Do not scale these drawings, use figured dimensions.
- 7. Refer IPWEAQ Std Dwgs D-0040 & D-0041 for Sediment Control Devices.

CONCRETE

- Concrete shall be Grade S32 minimum.
- Concrete cover to reinforcement shall be 40mm unless otherwise noted.
- 3. All concrete must be cured in accordance with the following:
 - Aliphatic alcohol must be used. The aliphatic alcohol should be applied after screeding & bull floating operations.
 - No water should be added to concrete.
 - An impermeable membrane should be applied. All joints in membrane are to be taped and the edges secured to prevent the ingress of air.
 - Minimum curing period shall be not less than 7 days for strength grade S32 and not less than 4 days for high early strength concrete.
- 4. Exposed edges of formed concrete elements shall have a 20mm chamfer unless otherwise noted. 5. All concrete shall be mechanically vibrated. Hand held vibrators must be held
- upright. Concrete must not be spread using vibrator. 6. Stiff broom finish to surface.

JOINTS

- 1. Provide contraction joints (CJ) at a maximum spacing approximately 1.5 times the width of the concrete path. Cut every second bar of mesh under joint. Saw cut joint shall be a wet cut within 24 hours of concrete pour.
- 2. Provide key joint (KJ) at 6.0m maximum spacing.
- 3. Provide expansion joint (EJ) at 12.0m maximum spacing. Joints to be filled with approved filler and sealant.
- 4. Construction joint to be provided adjacent to all concrete property crossings and any significant change in width and direction.

VEGETATION

- 1. Grassed area disturbed by construction shall be trimmed and revegetated on completion of the pathway. Where the existing footpath is well grassed and maintained, provide a 0.5m wide strip of turf to both sides of pathway. Turfing to match existing grass species where possible. Where existing footpath is bare or not maintained, provide a 0.5m wide strip of good quality topsoil. Disturbance to established vegetation should be minimised during construction.
- 2. Contractor to liaise with the resident and Parks Services prior to the removal of any trees. Parks Services to supply and replant replacement trees of an appropriate species where indicated, including establishment activities for up to 4
- 3. Grind tree stumps to a minimum of 500mm below finished ground level, backfill with crusher dust and 50mm topsoil at surface.
- 4. The construction site shall conform to the requirements of Environment Management

SERVICES

- 1. Existing irrigation pipes and sprinklers disturbed by construction is to be reinstated with sprinkler heads placed 0.5m from the face of kerb.
- 2. Fire Hydrants and Sluice valves disturbed by the construction of the pathway are to be made flush with the pathway and recapped appropriately.
- 3. Locate all property drain outlets in kerb and ensure they remain in service when construction is complete.
- 4. Electricity, Telecommunications and Gas service covers that are disturbed by the construction of the pathway are to be made flush with the pathway and recapped appropriately. Refer to the relevant Authority for the work to be carried out.

EXISTING PERMANENT SURVEY MARKS AND IRON PINS

- 1. The Contractor shall arrange for the TCC Surveyor to locate and expose the existing PSM's and Iron Pins.
- 2. Where the PSM and Iron Pin location clashes with the pathway alignment, a cast iron cover box shall be installed and finished flush with the final path level as directed by the TCC Surveyor.
- 3. The alignment of the path may be varied to preserve the PSM's and Iron Pins.
