

TOWNSVILLE LABORATORY SERVICES

Pool Water Analysis

Townsville Laboratory Services (TLS) provides analytical services to pool operators, in accordance with Queensland Government guidelines for the management and safe operation of swimming pools and spas.

Good management of swimming pools and spas ensures that patrons are not subject to health risks and is applicable to both private and public operators.

TLS' pool water testing capability includes:

- E. coli analysis
- Pseudomonas aeruginosa analysis
- Heterotrophic plate count
- Disinfection levels
- Corrosiveness of pool water
- Analysis of suspected contaminants

Routine analysis is especially important for pools with high visitation numbers, particularly in summer months.

Continued monitoring of pool water quality is also important to determining the effectiveness of a disinfection program.

TLS takes pride in providing fast and accurate analysis at competitive prices. Sample collection training can also be arranged for clients if required.

ABOUT US

TLS is a National Association of Testing Authorities (NATA) accredited laboratory located at the Douglas Water Treatment Plant.

We currently service a range of industries, from local government to hospitals, universities, schools and other institutions in North Queensland.

ACCREDITATION AND QUALITY ASSURANCE

TLS is NATA accredited for chemical testing and biological testing (accreditation number 14698). TLS obtained quality system certification to ISO 9001 in 2003.
