

Townsville Laboratory Services Volatile Organic Compounds

Townsville Laboratory Services offers wastewater (sewage) and trade waste analysis services to private clients at competitive pricing.

Volatile Organic Compounds (VOC) are compounds that readily evaporate at room temperature and may affect the odour and taste of water. More importantly, some VOCs are dangerous to human health and can cause harm to the environment, often despite the odour being perceived as pleasant or acceptable.

VOC testing

Townsville Laboratory Services have VOC testing available for:

- Trihalomethanes
- Benzene, Toluene, Ethylbenzene and Xylene
- Naphthalene

Analytical services

VOC analysis is available to private businesses, organisations and external clients at competitive pricing. We take pride in providing fast and accurate analysis. Please contact us for further information.
